PROFESSIONAL SUMMARY

Senior frontend and mobile engineer with 12+ years of software development experience across web, cross-platform mobile, enterprise applications, and international client environments. Specialized in React, React Native, Next.js, and TypeScript, with experience building reusable architectures, leading and mentoring developers, supporting production releases, and collaborating with global product, QA, backend, design, and security teams. Currently contributing to an enterprise AI platform and using AI-assisted engineering tools for code analysis, debugging, refactoring, and automation.

TECHNICAL SKILLS

Frontend: React, Next.js, TypeScript, JavaScript, HTML5, CSS/SCSS, Tailwind CSS, MUI, Ant Design, Bootstrap

Mobile: React Native, Expo, React Native CLI, iOS & Android deployment, React Navigation, Victory Native

State / Data / APIs: Redux, React Hooks, REST APIs, Axios, SQLite, Firebase, DynamoDB

CMS / Platforms: WordPress, Strapi / Headless CMS

Testing / Delivery: React Testing Library, Jest, Mocha, Git, GitHub Actions, code review, release support

Security / AI Tools: Dependabot, npm security findings, GitHub Copilot, Anthropic Claude, prompt engineering, Python-assisted automation

EXPERIENCE

KPMG Philippines, Makati • SR. Consultant

(03/2026) - Present

Working on an enterprise AI platform, developing and enhancing AI-powered applications and internal productivity tools.

- Develop and maintain frontend features using React, TypeScript, and modern web technologies.
- Deliver features, enhancements, and defect fixes across multiple product versions and release cycles.
- Build reusable UI components and help maintain scalable frontend architecture.
- Work with Dependabot and npm security findings, resolving dependency vulnerabilities and compatibility issues.
- Use AI-assisted development tools such as GitHub Copilot and Claude for code analysis, debugging, refactoring, and development workflows.
- Contribute to Python-based automation and engineering scripts, leveraging AI-assisted development where appropriate.
- Collaborate with backend engineers, QA, designers, product owners, and security teams across global teams.
- Provide hands-on support during deployment war rooms, production releases, and post-release hypercare, including troubleshooting and resolving release-critical issues.
- Support multiple releases from development and QA through production deployment and stabilization.
- Participate in code reviews and help maintain code quality, security, and reliability across releases.

Gold Group Enterprises, NJ 07712 • Software Engineer - Mobile Developer

(04/2024) - (04/2025)

- Developed a comprehensive cross-platform wellness application for iOS and Android using React Native and Expo, delivering a responsive and consistent user experience across devices.
- Led the integration of TryVitals and third-party health services to enable real-time tracking and visualization of user health and vital data.
- Designed and implemented a SQLite-based local data layer for importing, storing, and managing health metrics efficiently, supporting application performance and scalability.
- Built reusable and modular React Native components, improving development efficiency, maintainability, and UI consistency throughout the application.
- Developed interactive health-data visualizations using Victory Native, enabling users to better understand and monitor their health trends.
- Collaborated closely with developers and cross-functional team members throughout the development lifecycle, contributing to feature implementation, integration, testing, troubleshooting, and production-ready delivery while following mobile development best practices.

Healthy Kitchen, United States • Team Lead Software Developer

(09/2024) - (03/2025)

Worked with PLANNED LLC. for almost 7 months, helping build and push the product toward MVP within an aggressive 2-month initial delivery target.

- Worked on the Admin Panel and public-facing Landing Page, implementing new modules, enhancements, and product features.
- Helped form and collaborate with a small delivery team composed of a Backend Developer and Mobile Developer to accelerate MVP development.
- Contributed to the mobile application, including bug fixing, feature enhancements, module integration, and production issue resolution.
- Worked closely across frontend, backend, and mobile development to ensure features were integrated and delivered smoothly.
- Supported ongoing product improvements, bug fixes, and feature requests after the initial MVP delivery.
- Currently remain available on an on-call / as-needed basis for technical support, maintenance, enhancements, and new feature development.

TechEdge Solutions, Inc, Makati Philippines • Sr. Front End Developer

(09/2022) - (02/2024)

- Specialized in React, Next.js, and React Native, with expertise in React Hooks, custom components, Redux, and other state management tools.
- Successfully deployed applications on both Android and iOS platforms, demonstrating proficiency in cross-platform development and deployment.
- Led end-to-end web development projects, ensuring the delivery of high-quality, high- performance, and user-friendly applications.
- Mentored junior developers, enhancing team productivity and skill levels through coaching and guidance.
- Collaborated effectively with cross-functional teams, translating design concepts into responsive web applications.
- Created multiple landing pages with intricate animations, consistently meeting tight project timelines.
- Developed custom boilerplate templates to streamline project initiation and maintain consistency.
- Enforced standardized coding practices to improve code quality and team efficiency. Utilized a diverse tech stack including Headless CMS, Tailwind CSS,
- Next.js, TypeScript, MUI, AntD, and other frameworks for various web applications.

- Landing Page for a known Governor: Simple SPA site for an informative website.

Prosperna, Philippines • Sr. Mobile and Web Developer

(04/2018) - (08/2022)

- Led cross-functional teams of junior developers, fostering knowledge sharing and professional growth.
- Developed cross-platform Android and iOS applications compatible with various devices.
- Created a project architecture template in React Native, incorporating Redux and React Native CLI/Expo for efficient development.
- Designed and implemented different themes for content management systems using web stacks.
- Developed a mobile app capable of printing on POS machines via Bluetooth connectivity.
- Designed and built reusable custom components using React and Next.js for enhanced code maintainability and productivity.

CustomThread Inc., Philippines • Web Developer

(02/2017) - (10/2018)

- Designed and developed internal web systems and customer-facing web experiences for CustomThread and Fundr.
- Built Uplift, an internal employee recognition platform that allowed employees to give peer recognition that could be converted into points, using React.js and Amazon DynamoDB.
- Developed an internal Order Management System to organize, assign, and track tasks across multiple departments, helping streamline day-to-day operational workflows.
- Worked closely with different departments to analyze existing processes and translate operational requirements into technical solutions, improving workflow efficiency and reducing manual processes.
- Took on an operations management role within Fundr's Direct-to-Garment department, combining technical expertise with hands-on understanding of production and operational workflows.
- Led end-to-end web development, from requirements and UI implementation through integration, testing, and delivery, with a focus on performance, usability, and maintainability.
- Collaborated with cross-functional teams to translate designs and business requirements into responsive web applications and landing pages, including interfaces with custom animations.
- Developed reusable components and boilerplate templates to accelerate project setup, promote consistency, and improve maintainability across applications.
- Established and promoted standardized coding practices, improving code consistency and development workflows across projects.
- Worked with React.js, Redux, Amazon DynamoDB, Bootstrap, Material UI (MUI), Ant Design (AntD), and other frontend technologies across internal and customer-facing applications.
- Served as a Technical Consultant for Fundr, providing technical guidance and helping bridge software development requirements with operational and business needs.

HIVE Inc, Philippines • Web Developer and Security Researcher

(02/2017) - (10/2018)

- Designed and developed a WordPress website from the ground up, including comprehensive technical and user documentation to support ongoing administration and maintenance.

- Established and improved SAP-related operational workflows for the Philippine Oncology Center Corporation – Fairview Center, helping streamline processes and improve day-to-day operational efficiency.
- Conducted market and digital research to support social media and Search Engine Optimization (SEO) strategies, contributing to improved online presence and audience engagement.
- Managed multiple web hosting and server environments, performing regular administration, maintenance, monitoring, troubleshooting, and security-related activities to support system availability and reliability.
- Implemented proactive security measures and server maintenance practices to reduce operational risks and help maintain stable, uninterrupted services.
- For your international resume, I particularly like the last two bullets because your title was Programmer and Security Researcher—so they make the security/hosting side of the role much clearer instead of making the position look primarily like WordPress + marketing.
